

Lab ID : opd 3103
Patient Name : Ms. NEHA PARWEEN
Ref By : Dr. RAMESH RAM BHMS
Location : Lab

Reg. Date : 07/02/26
Report Date : 07/02/26
Age/Sex : 27 Year/Female
Sample Collected At Lab

WIDAL TUBE TEST

TEST DONE

RESULT

Salmonella typhi 'O' : 1 : 160
Salmonella typhi 'H' : 1 : 80
Salmonella paratyphi 'AH' : NO AGGLUTINATION
Salmonella paratyphi 'BH' : NO AGGLUTINATION

Method : Tube Test.

Significant Titre : Sera from normal individual may show agglutination up to 1 : 40 dilution.
1 : 80 or more is considered significant. More Than 1:120 Titre is usually suggestive of infection.

Note : Positive Test is put up with doubling dilutions of serum from 1:40 to 1:320. Repeat testing with increasing titer is suggestive of infection with salmonella species.

Limitations:

This test may be negative in the first week of fever with salmonella infection.

Previously vaccinated individuals will show a positive test.

Positive results will also be seen in patients who have suffered from salmonella infection in the recent past.
